### DETAILED ACTION

1. This office action is in response to the applicant's communication received on November 24, 2006.
2. Claims 1-40 are presented for examination. Applicants have amended claims 1, 3, 6-8, 10, 15, 17, 20-22, 24, 29, 31, 34, and 40 in the amendment received on November 24, 2006.
3. Applicant's arguments with respect to claims 1-40 have been considered but are moot in view of the new grounds of rejection.

### ***Claim Rejections - 35 USC § 101***

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 1, 9, 15, 23, 29, and 30 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. As follows:

Independent claims 1, 9, 15, 23, 29, and 30 recite "determining" and/or "determined". The term "determining" and "determined" has multiple definitions. These definitions include "to fix conclusively", "to find out" or "come to a decision by reasoning". While "determining" or "determined" is not considered to be a concrete result which enables any usefulness of what is being formulated to produce a reasoning based on fixing, finding out, or coming to a decision. It is believed to be an abstract manipulation, as such claims 1, 9, 15, 23, 29, and 30 are not believed to be producing a

useful result which would enable any usefulness of the invention. Again, the claim limitations for "determining" or "determined" appear to be a sequence of instructions comprised of software.

The claims lack the necessary physical articles or objects to constitute a machine or a manufacture within the meaning of 35 USC 101. They are clearly not a series of steps or acts to be a process nor are they a combination of chemical compounds to be a composition of matter. As such, they fail to fall within a statutory category. They are, at best, functional descriptive material *per se*.

Descriptive material can be characterized as either "functional descriptive material" or "nonfunctional descriptive material." Both types of "descriptive material" are nonstatutory when claimed as descriptive material *per se*, 33 F.3d at 1360, 31 USPQ2d at 1759. When functional descriptive material is recorded on some computer-readable medium, it becomes structurally and functionally interrelated to the medium and will be statutory in most cases since use of technology permits the function of the descriptive material to be realized. Compare *In re Lowry*, 32 F.3d 1579, 1583-84, 32 USPQ2d 1031, 1035 (Fed. Cir. 1994)

Merely claiming nonfunctional descriptive material, i.e., abstract ideas, stored on a computer-readable medium, in a computer, or on an electromagnetic carrier signal, does not make it statutory. See *Diehr*, 450 U.S. at 185-86, 209 USPQ at 8 (noting that the claims for an algorithm in *Benson* were unpatentable as abstract ideas because "[t]he sole practical application of the algorithm was in connection with the programming of a general purpose computer.").

6. Claim 31 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. As follows:

Independent claim 31 is directed toward decoding the av contents and the synchronized interactive contents based on the identification of the synchronized interactive contents and corresponding to the received navigation control command. What happens to the data after performing these steps with decoding and identifying synchronized contents that correspond to a navigation control command? There appears to be a step missing with regards to producing a useful, concrete, and tangible result. The claimed inventions, as a whole must accomplish a **practical application**. That is, it must produce a **"useful, concrete, and tangible result."** *State Street, 149 F.3d at 1373, 47 USPQ2d at 1601-02. MPEP 2106*. In each of these cases the result is the storage of a range identifier and an order identifier to identify elements within the row of a database table. The claimed limitations are an abstraction as they are not **useful, concrete, and tangible**, they are not put in any tangible form and not useful because they are not presented in such a way to provide some result that is of utility that may exist in the specification however no specific use is provided for in the claimed invention. Thus the claims are non-statutory and stand rejected under 101 as not **producing a "useful, concrete, and tangible result."**

Therefore, the remaining claims are dependent claims, these claims are also rejected for being dependent upon the above rejected independent claims.
